

Masterclass in Hazardous Waste Management

Faculty of Health and Sport Sciences

Introduction

Scheduled wastes are by nature very toxic and dangerous. Improper management of such wastes will lead to serious pollution of the environment and the ecosystem as well as immediate or long term impacts to human health. Managing scheduled wastes requires a comprehensive understanding of regulatory framework, waste properties, waste management concepts, and accepted good management practices. There is a need to ensure that scheduled waste on any premise is managed properly in accordance with the legal requirements. This unique training program focuses on hands-on approach. The management system shall contain the main elements include policy, organizing, planning and implementation, evaluation and action for improvement of the system.

The learning objective is to understand the management of scheduled waste which is hazardous to the environment.
