

Masterclass in Management of Trauma Patients

Faculty of Health and Sport Sciences

Introduction

Trauma occurs almost every day in people's lives. Healthcare providers need in-depth knowledge and skills in handling a trauma patient. In order to achieve the best possible outcomes while decreasing the risk of undetected injuries, the management of trauma patients requires a highly systematic approach. Trauma care involves first aid and basic life support administered by healthcare personnel in the hospital emergency department. This is followed by critical care by specialists in the respective fields including medical imaging for trauma patients for initial and complex diagnosis.
