

# Masterclass in Occupational Safety and Health Management System

Faculty of Health and Sport Sciences

## Introduction

The implementation of Occupational Safety and Health Management System (OSHMS) in organisation aims to reduce the risks related to occupational related accidents and health conditions reducing and consequently improve the productivity, safety and health of employees.

In Malaysia, OSHMS requirements were introduced through the Malaysian Standard (MS) 1722:2011 and the international standard Occupational Health and Safety Assessment Series 45001. OSHMS is a set of interrelated or interacting elements to establish and implement OSH policy and objectives, and to achieve those objectives in order to manage risks.

OSHMS have been recognised as a tool to effectively manage occupational risk. This program on OSHMS covers all the main elements such as policy, organizing, planning and implementation, evaluation and action for improvement of the system.

## Who Should Attend?

This masterclass is designed for students who want to gain extra knowledge in Occupational Safety and Health Management System

## Duration

7 hours

## Certification

Certificate of Completion by MAHSA University
