

Masterclass in Temporomandibular Joint Dysfunction

Faculty of Health and Sport Sciences

Introduction

Temporomandibular joint disorder (TMJ disorder) is a condition that causes frequent pain in the jaw joint. This course is designed to provide students with the greater understanding of the mechanism of the TMJ, the assessment and treatment using manual techniques and exercises.

The learning objective is to understand the structures and function of TMJ, assessment procedures and interventions for TMJ disorders. TMJ dysfunction can associate with cervical problems as both of these joints have biomechanical relationship.

Content

Introduction to Temporomandibular Joint (TMJ) – Terminology, Structure and function of the TMJ, Kinematic/dynamic

Assessment of the TMJ - Surface anatomy, Movements of TMJ, Muscles and Ligaments

Management of TMJ Dysfunction - Soft tissue technique, Joint mobilisation and exercises

What will you learn?

- Complexity of the mechanism of TMJ
- Assessment and early intervention
- Manual techniques and exercise for treating TMJ dysfunction

Who Should Attend?

This master class in TMJ dysfunction is designed for year 3 physiotherapy students to gain additional knowledge in management of TMJ dysfunction

Duration

7 hours

Certification

Certificate of Completion by MAHSA University

Fee

MAHSA Students
RM 280

Public Participants
RM 350
